Magnetec Simulation Tool

Efficiency is our passion

Magnetec provides excellent product design and simulation support through a single tool:

The Magnetec Simulation Tool

Create your own custom design with various shapes and dimensions and receive instant feedback on its basic manufacturability.

Comparison of three different designs

Simulate different permeability levels, compare your designs, generate a simulation report with all relevant characteristics, create a spice model for AC analysis with a single mouse click, and see if standard products comparable to your design are available.

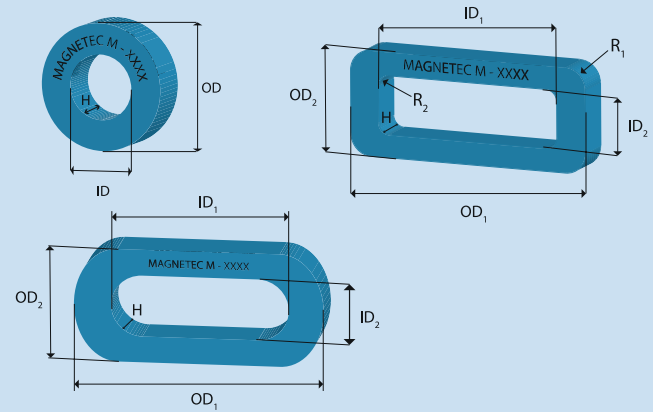

If you require assistance or additional information on your design, you can always contact our Magnetec application engineers by submitting a request directly from the tool.

Try it for yourself! Begin your own design now in the Magnetec Simulation Tool.

What can you simulate?

- EMC Cores

What can you do with the Simulation Tool?

- Create your individual designs
- Save your designs for future use
- Compare your design's simulation to your other previously created designs
- Compare your designs' simulations to existing products
- Check feasibility
- Create and export simulation reports for your designs
- Contact Magnetec application engineers for assistance
- Create a request directly from the tool

Watch the introduction videos on YouTube for more information on how to use the Magnetec Simulation Tool.
